

Job Description of Python Junior+TWA for Turing - USA

Title: Python Junior+TWA

Location: Los Angeles, CA, USA

Job Description:

We are actively seeking talented Python Developers to join our ambitious team dedicated to pushing the frontiers of AI technology. This opportunity is tailored for professionals who thrive on developing innovative solutions and who aspire to be at the forefront of AI advancements. You will work with different companies in the US who are looking to develop both commercial and research AI solutions.

Job Responsibilities:

- Write effective Python code to tackle complex issues
- Use business sense and analytical abilities to glean valuable insights from public databases
- Clearly express the reasoning and logic when writing code in Jupyter notebooks or other suitable mediums
- Communicate and collaborate with researchers
- Ensure comprehensive code documentation
- Utilize your data analysis skills to develop and respond to important business queries using available datasets (such as those from Kaggle, the UN, the US government, etc.)

Job Requirements:

- Role is open for all individuals including juniors and industry experts
- A degree in Engineering, Computer Science, or equivalent hands-on experience
- Good understanding of Python for writing and troubleshooting code
- Competence in tackling intermediate Python coding challenges and understanding algorithms
- Adept at problem-solving, with exemplary reasoning and logical/mathematical prowess
- Proficiency in English and strong communication abilities for effective teamwork

Offer Details:

- Long term contractor position
- Full time dedication (40 hours / week)
- Requires 4 hours overlap with PST (Pacific Standard Time)

Experience: 1-3 years
